

# Generative AI

Generative AI is revolutionized the way businesses work, and Antares is excited to offer a Generative AI Pilot program that allows enterprises to take full advantage of this transformative technology.

Our offering centres around Discovery, Assessment, Ideation, and Strategy, enabling customers to co-pilot and steer their Generative AI-driven business reimagination journeys with ease.

## Our Generative AI Pilot program consists of the following stages:

### 1. Contextualized PoV, evangelization, and art of possible demos of Open AI PoCs.

We provide a contextualized Proof of Value (PoV) demonstration of Open AI's capabilities, including the art of the possible. This demonstration includes evangelization on the impact of Generative AI on business and how it can transform enterprises.

### 2. Discovery and co-ideation of high-level use cases based on business and technology context.

We work with our customers to discover and co-ideate high-level use cases that are tailored to their specific business and technology context. This includes exploring areas where Generative AI can have the most significant impact and identifying the potential business benefits.

### 3. Quick-win PoC based on identified use case with targeted business benefit.

We develop a quick-win Proof of Concept (PoC) based on the identified use case with targeted business benefits. This PoC is designed to demonstrate the capabilities of Open AI to validate the potential benefits to the enterprise.

### 4. Pilot of use case for a department or group or division depending on success of PoC.

Based on the success of the PoC, we pilot the use case for a department, group, or division within the enterprise. During this phase, we work with the customer to refine the solution and identify any areas for improvement.

### 5. Develop roadmap to onboard and adopt OpenAI at scale.

This includes best practices and our deep contextual understanding and experience across our client base around Responsible AI, data and model privacy, security, prompt engineering, scale, and performance.

With our Generative AI Pilot program, we aim to help our customers realize the full potential of Generative AI and transform their business models and operations radically.

## Generative AI Pilot

### 1 Discovery

1-2 DAYS

- Contextualized PoV, evangelization, and art of possible demos of OpenAI PoVs
- Discovery and co-ideation of high-level use cases based on business and technology context
- Prioritisation of use cases

### 2 Pilot

4-6 WEEKS

- Quick-win PoV for a use case with targeted business benefit;
- Pilot use case for a department or a group or division based on success of a PoV;
- Solution refinement and identify areas of improvement.

### 3 Road Map

1 WEEK

- Develop a high-level road map to onboard and adopt Open AI at scale.
