

QBot

Your AI-powered assistant—secure, customisable and built for you.

Unlock productivity across your organisation with QBot — your custom AI assistant powered by the Copilot stack using the Semantic Kernel framework for the way your team works.

QBot goes beyond chat. It's a Platform-as-a-Service (PaaS) solution designed to scale with your business. With support for multiple personas, role-based dashboards, and seamless Microsoft integration, QBot fits into your existing workflows while keeping your data secure and your teams efficient.

72%

of organisations have adopted AI in one or more business functions!

-McKinsey & Company, 2024

How QBot Delivers Value

Customisable Personas:

Deploy intelligent AI agents tailored to business roles like HR or Legal. With access control, defined data sources, and Azure OpenAI model settings, they deliver secure, contextual, human-like interactions aligned with your brand.

Document Understanding:

Comprehend and summarise content from documents and emails. Built on Semantic Kernel Memory, AI Search with embeddings, and RAG architecture, it enables real-time insights and intelligent processing — no manual input needed.

Voice Recognition:

Enable seamless voice-to-text capabilities with Azure Speech Service. Let users speak naturally while the bot transcribes and responds with contextual accuracy.

Multi Channel Deployment:

Activate QBot across Microsoft Teams, SharePoint and even required third party apps. Maintain consistent user experiences and centralised control with employees on the platforms they use.

Advanced Analytics:

Gain real-time visibility into processes and engagement through live dashboards. Track KPIs, identify friction points, and optimise interactions with enterprise-grade telemetry and plug-in integrations.

Multilingual Support:

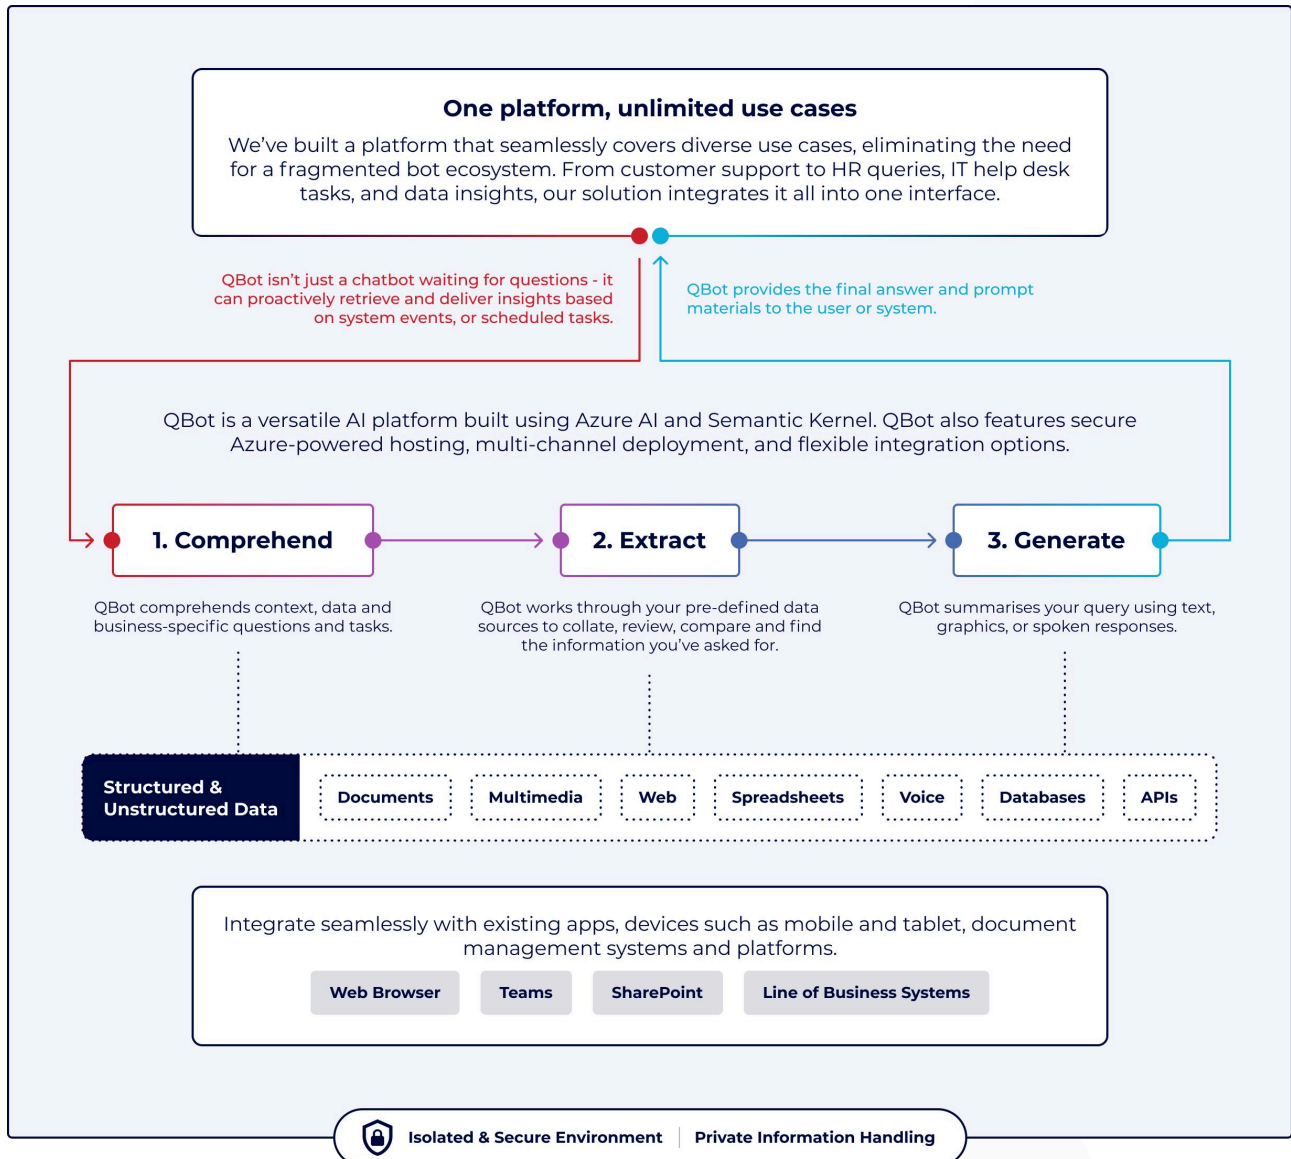

Break language barriers with built-in translation and localisation support across languages. Ensure inclusivity, improve user satisfaction, and expand global reach.
